GREX VP of Marketing and Sales Nate Bachman Elected to REMSA Board of Directors

Georgetown, Texas (*September 9, 2016*) – Nate Bachman, vice president of marketing and sales at Georgetown Rail Equipment (GREX), has been elected to the board of directors for the Railway Engineering-Maintenance Suppliers Association (REMSA). The announcement was made on August 29 at REMSA’s Annual Membership Meeting in conjunction with the AREMA Annual Conference and Exposition.

In his two-year term as a REMSA director, Nate Bachman will play an integral role in making key decisions for the organization and advocating for companies and individuals in the rail industry.

“I’m honored to be elected to the REMSA board of directors,” says Bachman. “REMSA is all about being voted on by your peers. The board members are a very distinguished group and to be elected by them means a great deal to me.”

Also newly elected to the REMSA board of directors is Greg Spilker, vice president of Encore Rail Systems.

“We are extremely pleased to welcome Nate Bachman to our organization and former REMSA Board Director Greg Spilker back for another term,” said REMSA Executive Director David Tennant in a recent news release. “However, they will have big shoes to fill as we are saddened to see John Fox and Phil Pietandrea leave us, but thank them for their dedicated service to REMSA.”

About GREX

Since 1993, GREX has been putting technology to use to develop solutions that solve some of the oldest problems in the railroad industry. The privately held company is based out of Georgetown, Texas and works in collaboration with customers across the globe to deliver custom solutions designed around their specific needs. GREX pinpoints where ballast is needed and automates its delivery, locates track flaws to keep operations running smoothly, helps railroads monitor bridges remotely, and much more. From the pioneering DumpTrain ballast delivery system to the new Aurora Xi™, track inspection system, GREX products stand out among the rest as more technologically advanced, safer and more efficient.
